Lennox Kahati

Software Developer

Career Summary

Engineering graduate with hands-on software development experience building backend services, REST APIs, and full-stack applications in Python, JavaScript, and Flask. Comfortable working with relational databases, integrating third-party APIs, and collaborating across engineering and research teams. Brings strong analytical and problem-solving skills from an engineering background, a fast learning curve, and a genuine interest in growing as a backend software developer.

Education

2019 – 2024 **B.Sc. Electrical and Electronics Engineering**, *University of Nairobi*, Nairobi, Kenya
Second Class Honours (Upper Division)

2015 – 2018 **KCSE**, *Lenana School*, Kenya
Grade: A-

Key Skills

Languages	Python, JavaScript / TypeScript, C/C++
Backend & APIs	Flask, REST API design and integration, MQTT messaging
Databases	MySQL (relational databases)
Frontend	React
Other	Machine Learning fundamentals, Git/GitHub, Embedded Systems Development
Leadership	Chairperson, Robotics and Automation Society (IEEE UoN)

Professional Experience

Nov 2024 – Present **Research Assistant**, *University of Nairobi*, Nairobi, Kenya
- Integrated REST APIs for automated data ingestion into analytics dashboards
- Designed IVR workflows for real-time public health data collection
- Research on climate-linked disease surveillance using inclusive IVR systems
- Co-authored and presented paper: *"Bridging Climate Change and Public Health: An Inclusive IVR Framework for Disease Surveillance"* at the International Conference on Artificial Intelligence, Computer, Data Sciences and Applications (ACDSA 2026), Boracay Island, Philippines

Aug 2023 – Nov 2024 **Embedded Systems Developer**, *iLab Africa*, Nairobi, Kenya
- Engineered a backend server architecture using MQTT and MySQL for embedded IoT data pipelines
- Developed embedded IoT solutions for sensor data acquisition

Jun 2024 – Nov 2025 **Quality Assurance Engineer**, *Transsion Kenya*, Nairobi, Kenya
- Performed functional and regression testing on TECNO, Infinix and Itel smartphones
- Identified firmware, network and hardware defects through structured debugging and root-cause analysis
- Collaborated with cross-functional engineering teams to improve device reliability

Projects

Climate-Linked Disease Surveillance IVR System	Built the Flask REST API backend for a mobile app collecting voice-based public health data in English and Yoruba (Yoruba in development), sending data to a cloud dashboard for processing.
CBR Challenger	A cloud-synced reading-progress tracker with secure Google OAuth authentication and REST API-backed data sync across devices, built with JavaScript and Python.
Air Quality Monitoring System	Built a Python REST API backend and React dashboard for real-time environmental sensor data visualization and analysis.
AI Healthcare Assistant Chatbot	A WhatsApp-based LLM-powered chatbot in Python (Flask backend) providing healthcare guidance in local languages, connected via APIs.

Strengths

Fast learner, comfortable picking up new tools and technologies independently.

Detail-oriented with a strong sense of ownership over my work.

Strong team player with clear communication and cross-functional collaboration skills.
